# Budapesti tömegközlekedés ábrázolása Neo4j segítségével

 Az adatok bemásolása az adott adatbázis mappájába

Adatok megtekintése, hibaellenőrzés

```
trips = pd.read_csv("trips.txt")
trips[["route_id", "trip_id", "shape_id"]].isna().sum(axis=0)

route_id     0
trip_id     0
shape_id     0
dtype: int64
```

Az idő probléma

```
stop times.departure time.max()
'28:39:00'
def idoalakitas(time):
   t = time.split(":")
   t = [*map(int, t)]
   t[0] = t[0] % 24
    return "{:02d}:{:02d}:.format(*t)
stop times.departure time = stop times.departure time.map(idoalakitas)
stop times.arrival time = stop times.arrival time.map(idoalakitas)
stop times.departure time.max()
'23:59:35'
```

Kapcsolatok a táblák között

|                  | shape_dist_traveled     |                   |                     |                     |                       |

Elkezdődhet a beolvasás

```
CREATE CONSTRAINT trip_id ON (t: Trip) ASSERT t.trip_id IS UNIQUE
LOAD CSV WITH HEADERS FROM 'file:///trips.csv' AS row
CREATE (t: Trip {trip id: row.trip id, route id: row.route id, shape id: row.shape id})
```

Hiba a beolvasásnál

```
ERROR Neo.ClientError.Schema.ConstraintValidationFailed
```

```
Node(821) already exists with label `Stop` and property `stop_id` = '9001'
```

- Kapcsolatok megteremtése, Trip-Stop
- :auto....- minden 100 000-ik után ment, hogy el ne vesszenek az adatok.
- MERGE létrehozunk vagy frissítünk.

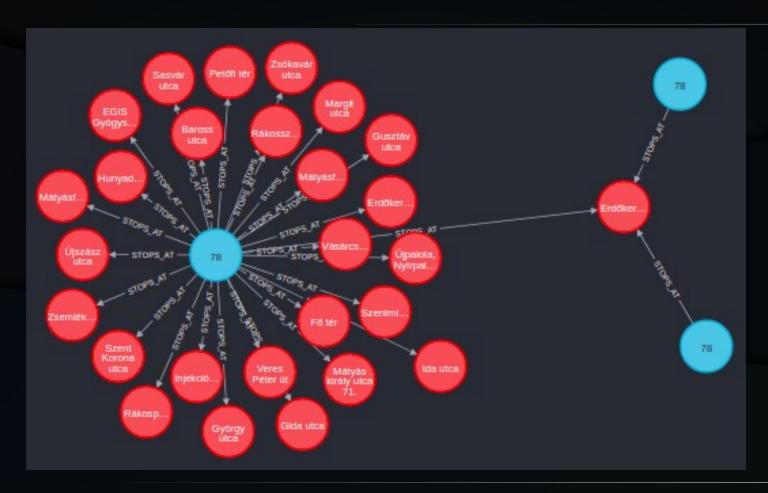

```
:auto USING PERIODIC COMMIT 100000

LOAD CSV WITH HEADERS FROM 'file:///stop_times.csv' AS row

MATCH (t: Trip {trip_id: row.trip_id})

MATCH (s: Stop {stop_id: row.stop_id})

MERGE (t)-[:STOPS_AT { arrival_time: time(row.arrival_time),departure_time: time(row.departure_time), stop_sequence: toInteger(row.stop_sequence) }]-
(s)
```

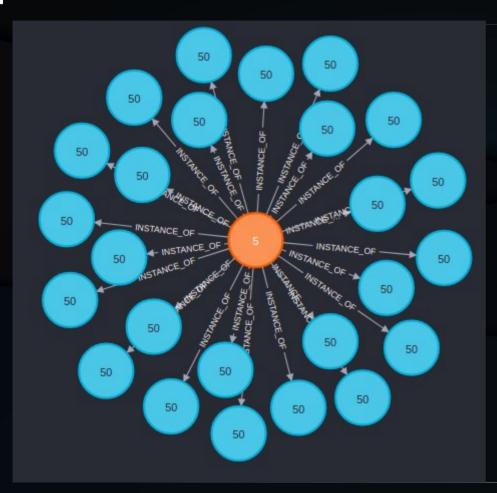

- Kapcsolat megteremtése, Routes-Trip
- Az r tábla és t tábla route\_id egyezésnél

```
MATCH (r: Route)

MATCH (t: Trip)

WHERE r.route_id = t.route_id

MERGE (r)-[:INSTANCE_OF]-(t)
```

- A kapcsolatok bárhogyan kialakíthatók
- A gráfokat mi alkotjuk

#### Lekérdezés

```
MATCH (s1: Stop)
WHERE s1.stop name CONTAINS "Városház tér"
MATCH (s1)-[:STOPS_AT]-(t: Trip)-[:STOPS_AT]-(s2: Stop)
RETURN DISTINCT s2.stop_name
LIMIT 10
       s2.stop_name
       "Tenkes utca"
       "Bányalég utca"
       "Jókai Mór utca"
       "Angeli utca / Nagytétényi út"
       "Nagytétény, Erdélyi utca"
```

#### Köszönöm a figyelmet!
